

INTERVIEW WITH YANK L'INNOMMÉ

Interviewee

Yank l'Innommé (The Nameless)

What is this?

In this interview we discuss KULT, horror gaming, and the Foundry module for The Black Madonna.

Characters, locations and incidents are portrayed from the metaphorical viewpoint of the *KULT: Divinity Lost* setting.

THE INTERVIEW

I'm Yank l'Innommé, a long-time role-player from France. I discovered L'Œil Noir (Das Schwarze Auge) at thirteen, then AD&D and Ravenloft. Whether through books, movies, or games, horror has always held a special place in my heart. I'm now a content creator for Foundry VTT, developer and game designer.

As I like to put it on my website:

I create role-playing games that awaken, websites that speak, and content that forces reflection.

With my hands, I code. With my voice, I guide. With my words, I shake.

For in a world that drifts asleep, I choose to disrupt.

That sums me up pretty well. I create immersive experiences. Whether through my words or my games, I don't seek to help people escape reality, but to face it head-on.

When did you first come across KULT?

My encounter with KULT: Divinity Lost is fairly recent. It dates back to 2021. I discovered it thanks to an actual play by Linou Majorzero: her scenario Deepwater Horizon, a reinterpretation of this real industrial disaster through the prism of KULT's horror, with Nahemoth and Yesod as the major figures. The way she linked the unique universe of KULT and this terrible human tragedy immediately caught my attention. Unfortunately, this video is no longer available, as Linou chose to rework the scenario to remove the elements related to KULT, in order to make it stand-alone and sell it.

What stories do you like to play?

Before KULT, I knew Call of Cthulhu. I admired its mythos, but it never truly spoke to me. What I was looking for was something more personal, something that didn't hide horror behind cosmic entities, but revealed it within us. KULT gave me that: the possibility to portray human horror, the corruption of the soul, the illusion of freedom. It's a game that dares to look at what we usually avoid.

Tell us about your experience with The Black Madonna.

My discovery of The Black Madonna began with the PDF preview in English and a few illustrative screenshots. The campaign fascinated me, but it also intimidated me. It seemed dense, labyrinthine, monumental. But at the time, it wasn't yet available in French.

So I focused on shorter scenarios first. I played and ran Deepwater Horizon, then played Oakwood Heights twice, a scenario of rare intensity, which I had translated into French for the occasion. I also played La Galerie des Âmes (Gallery of Souls) twice.

When The Black Madonna was finally published in French, I decided it was time to take the plunge and really get into it. But when I started transposing the campaign to Foundry VTT, I quickly realized the magnitude of the task. That's what led me, in order to do justice to this campaign, to consider a complete, ready-to-use module.

Tell us about the process of creating the Foundry module for The Black Madonna campaign.

Before The Black Madonna, I had already created an entire ecosystem for KULT: Divinity Lost on Foundry VTT: several modules that complement each other and make it easier to master the game. These include ready-to-play versions of the Oakwood Heights and Gallery of Souls scenarios.

That experience, and my previous contact with Helmgast, naturally led me to propose a premium module for The Black Madonna. From the start, I knew I didn't want to make a quick adaptation. I wanted something that matched the quality of the published campaign, a true digital counterpart.

I initially thought it would take six months. It ended up taking nearly a year. But I'm proud of the result: a fully playable campaign where, with a single click, you have everything ready (every text, every NPC, every map...) built with deep respect for the original work.

How do you think online play changes the dynamics of storytelling and immersion compared to in-person sessions?

In my opinion, online gaming offers a completely different setting from face-to-face gaming. Face-to-face gaming requires players to be physically present, which often leads to greater involvement on their part. When playing online, you clearly have to earn that involvement. Tools such as Foundry VTT are perfect for creating a new setting and offering a new experience, whether through interactive maps that can be explored gradually or through the creation of a real musical universe that creates atmosphere and tension. And so, almost paradoxically, it is possible to offer a highly immersive experience by fully capturing the player's attention.

As a designer, I see online gaming as a new means of artistic expression, not as a substitute for in-person tabletop gaming, but as a different stage where the interface can become the narrative. But perhaps I'm straying a little from the point here.

Scenario: Chapter 4 - German Autumn

- Chapter 4 - German Autumn
- Newspaper Headlines
- Germanische Gemeinschaft**
- Harmann's Mechanical Weapons Store

Scenario 5: Chapter 3 - Dark Dreams

- Chapter 3 - Dark Dreams
- The Dreams of the Wanderer
- The Dream Clinic
- Dream Camp S-17
- The Illusion Shatters
- Leningrad in the Dream
- Kalenko's House in Dream Leningrad
- Continued Investigations
- The Red Cross
- Changing Identities
- Leningrad
- Lebnovitz's Memories
- Jurij Chazov
- Other Sources
- Inferno in the Dream
- Three Old Acquaintances
- Pyrat's Captivity
- Encounter with the Death Angel
- Epilogue

6. Chapter 4 - German Autumn

5. Chapter 3 - Dark Dreams

The night after receiving the porcelain doll from Pyotr (see [Chapter 2](#)), the player characters (PCs) share the same dream. If the characters visited the Frankfurt Clinic prior to freeing the Incarnates, the dream does not come until the night after the Incarnates are set free. In the dream, the characters see each other. The character who received the doll has it with them. If they try to dispose of the doll, it always reappears after a few minutes.

The PCs stand in a white landscape, surrounded by fog. They glimpse low hills on the horizon. A lonely tree rises on a hillside before them. It is comfortably warm and a faint breeze ruffles up their hair, smelling of topsoil and the ocean. The sky is scarlet red, as if the moment before sunrise. Clouds of mist twist and turn. Shapes form in the veils of fog, only to disappear as soon as they are looked at. The characters can speak freely with one another and travel wherever they please. If they wish, they can walk in different directions, but always return to the group after a short while. After they have explored for a brief time, they notice a man sitting by the tree on the hill. He leans against the weathered tree trunk, resting comfortably. When they notice him he beckons the characters to come closer.

As the characters approach him, the man rises and introduces himself as **The Wanderer**. The characters sense something vaguely familiar about him, but they cannot place it. If they inquire, he says he knows them, but cannot say from where.

Do you think playing horror games online changes the atmosphere or intensity for players?

Necessarily, yes. It changes the way fear works. At the table, fear is shared through glances, hesitations, and silence; online, it arises from loneliness. The screen becomes both a gateway and a prison. You can't see everyone breathing, and even within a team, you feel a little alone in the face of horror. This isolation can make KULT even more oppressive, more introspective.

With the right sound environment and pace, online horror becomes almost real. And players enter a personal nightmare rather than a collective fear. But be careful, always within a specific framework and with emotional safety tools, I am sometimes a real monster with the player characters, but I love my players.

Out of all possible scenarios, why *The Black Madonna*?

Because *The Black Madonna* isn't just a scenario, it's a campaign. I've played a lot of short scenarios, both for KULT and other games. And I love that format, it lets you explore a story in two or three sessions. But the best way to truly sink into a universe will always be through a campaign.

The Black Madonna lets you experience KULT in its full depth: its setting, its themes, its symbolism. I could say more, but I don't want to spoil anything. Just read it, or play it.

What kind of experience are you hoping people will have using *The Black Madonna* module?

I want GMs and players to feel the full intensity of the campaign without getting lost in logistics. With this module, everything (text, NPCs, maps, lighting, and notes...) is there, ready to play, faithful to the original work.

I hope people can focus entirely on the historical and emotional journey that *The Black Madonna* offers. May they experience it, not just play it.

Do you have any tips for gamemasters who are just getting into roleplaying online?

Don't try to recreate a physical table, adapt to the medium. Online gaming has its own language: use images, maps, music, and even silence as narrative tools. Prepare emotionally charged moments, but give players time to absorb them.

Above all, be kind to yourself. There will be technical problems, failed connections, microphones that don't work properly, but it doesn't matter. Role-playing is still a game, and that playful spirit should always remain.

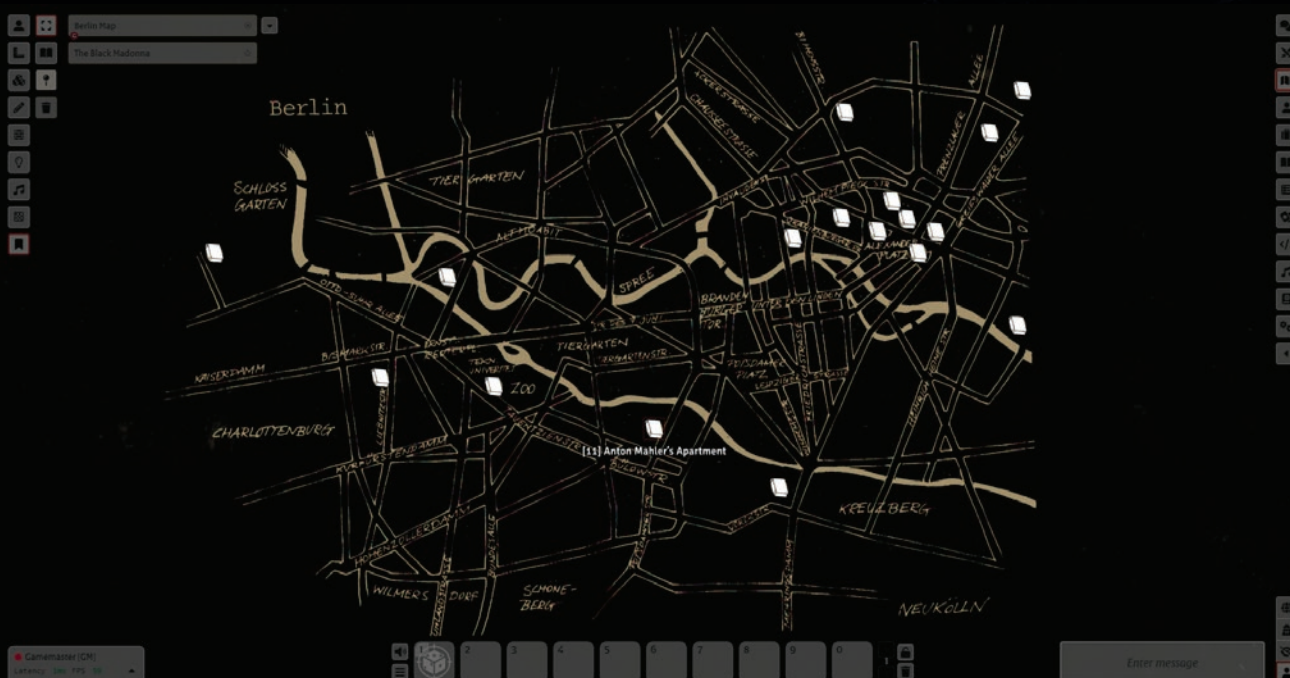

Where can we find more about your work?

You can find my work at <https://yanklinhomme.fr>

There, I've gathered my portfolio (which includes some of my Foundry VTT modules, my original games, and much more), my unfinished projects, and my articles, all guided by the same intention:

To awaken imagination. Reveal reality. And not just stand there watching.
